**Message**

IRID has been engaged in developing robots for decommissioning works. Currently, the second stage of) development site. The following is a message from Hajime Asama, the head of a team in charge of decommissioning works.

IRID has been engaged in developing robots for decommissioning works. Currently, the second stage of development site. The following is a message from Hajime Asama, the head of a team in charge of decommissioning works.

**Robots**

Various robots that support and take the place of human beings in decommissioning works at Fukushima Daiichi Nuclear Power Station.

**Main function and names of parts of the remotely controlled robot**

- **Investigation device**
  - Camera
  - Ultrasonic sensor
  - Laser beam sensor
- **Investigation robots**
- **Decontamination robots**
  - Decontamination device
  - Friction cleaning
  - Laser beam cleaning
  - Magnet attraction
  - Water jet
- **Moving device**
  - Motorized
  - Hand controller
  - Servo motor driving mechanism

**IRID**

IRID, a research institution established by the Ministry of Education, Culture, Sports, Science and Technology, specializes in the development of robots. The following is a message from Hajime Asama, the head of a team in charge of decommissioning works.
