The 9<sup>th</sup> INMM/ESARDA/INMM-Japan Joint Workshop Future Challenge for the Enhancement of International Safeguards and Nuclear security

# Overview of IRID R&D for fuel debris retrieval technologies at Fukushima-Daiichi

7th Oct. 2019

## Naoaki Okuzumi International Research Institute for Nuclear Decommissioning (IRID)

The results are obtained under the Subsidy Project of Decommissioning and Contaminated Water Management granted by the Ministry of Economy, Trade and Industry.

## **Outline of IRID**

#### 1. Name

International Research Institute for Nuclear Decommissioning

(IRID)

http://www.irid.or.jp/en/

R&D

#### 2. Date of Establishment

August 1, 2013

#### 3. Membership (18 organizations)

2 Research Institutes JAEA etc.

4 Manufacturers

ToshibaESS, Hitachi-GE, MHI etc.

12 Electric Utilities, etc.

TEPCO Holdings etc.

IRID

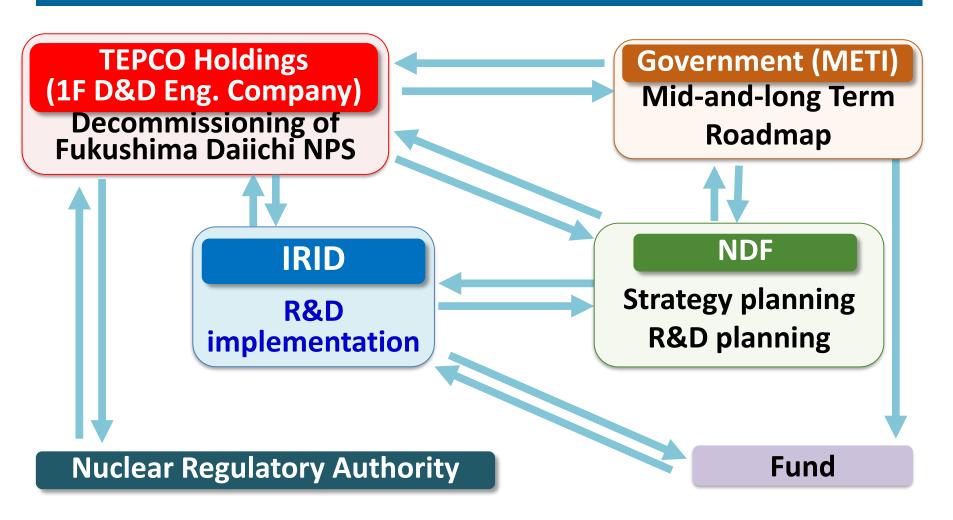

**Entities** 

HRD

**International** 

## Role of IRID

R&D for decommissioning of the Fukushima Daiichi NPS, with a view to strengthening the foundation of nuclear decommissioning technologies.

#### 1.R&D for Fuel Removal from Spent Fuel Pool

**Evaluation on Long-term Integrity** of the Fuel Assemblies Removed from Spent Fuel Pool

Completed in March 2016

#### .R&D for Radioactive Waste

Technology for **Proceeding Process Methods** of Radioactive Waste

Completed in March 2019

Technology for Treatment and **Disposal** of Solid Radioactive Waste

<Fuel Debris Retrieval>

#### 2. R&D for Fuel Debris Retrieval

**Technology for Decontamination and Dose** Reduction

> Remote-operated Decontamination Technology in R/B

Completed in March 2016

<Ensuring Stability> Corrosion Control Technology in RPV/PCV

> Completed in March 2017

Seismic Resistance **Assessment** for RPV/PCV

Completed in March 2018

**Fuel Debris Retrieval Technology** Criticality Control Technology for **Fuel Debris** Retrieval Completed in

/Fundamental **Technologies** For Retrieving Fuel Debris and Internal Structures

Completed in March 2019

Fundamental Technologies for **Small Neutron Detector** 

Completed in September, 2018

Development of **Technology** For Retrieving Fuel Debris/ Reactor Internals

**Dust Collection System** for **Retrieving Fuel** Debris and Reactor Internals

Technology for Collection, **Transfer** And Storage of **Fuel Debris** 

#### **Technology for Environmental Improvement**

Repair/Water Stoppage **Technology** For PCV Leakage

> Completed in March 2018

Full-scale test of Repair Technology for PCY Leakage

> Completed in March 2018

Water Circulation Technology for PCV

Full-scale Test For PCV Water Circulation Technology

> Completed in March, 2018

Submersible Crawling Robot

## **Unit 2 investigation: Pedestal Floor**

Bottom of the Unit 2 PCV (An overhead image)

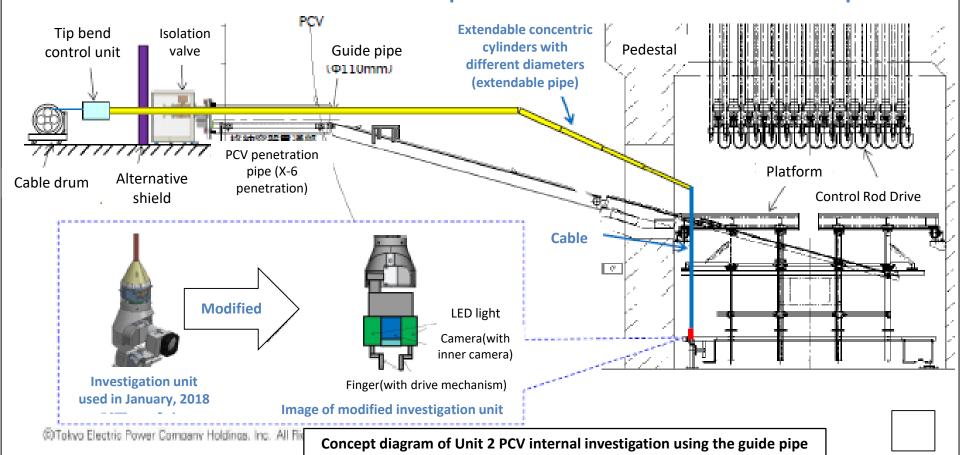

Pedestal floor and wall Fuel debris? and a fuel assembly handle

## **Contact with Deposits (Unit 2)**

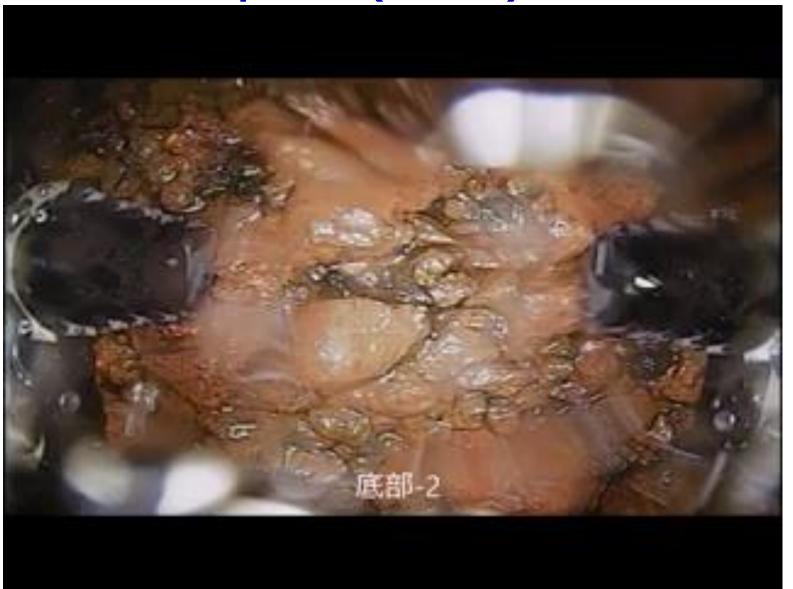

**Investigation date: Feb.13, 2019** 

- The properties of the deposits (hardness and fragility, etc.) that were observed on the bottom of the pedestal in Unit 2 were unknown, therefore it is important to understand the mobility beforehand.
- It is considered that the investigation unit used in January, 2018, will be modified, and the mechanical force will be added to the deposits to observe the behavior of the deposits.

## **Contact with Deposits (Unit 2)**

**Investigation date: Feb.13, 2019** 

The investigation report is provided by Tokyo Electric Power Company (TEPCO) Holdings, Inc.

  - (1) Results of completed investigation
  - (2) R&D for next investigation
- 3. R&D for Fuel Debris retrieval technologies

## **Boat Type Access Device**

■ A boat type access device has been developed, which can move on a wide range of the water surface in the

primary containment vessel (PCV).

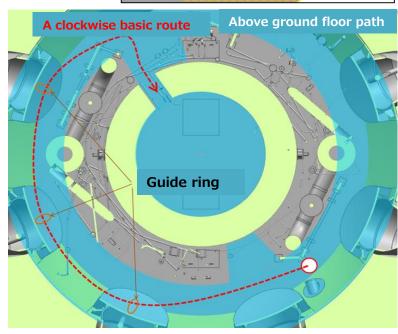

Example: Guide ring installation

Diameter: φ25cm

Length: Approx. 1.1m

Thrust: Over 25N

Appearance of the boat type access device

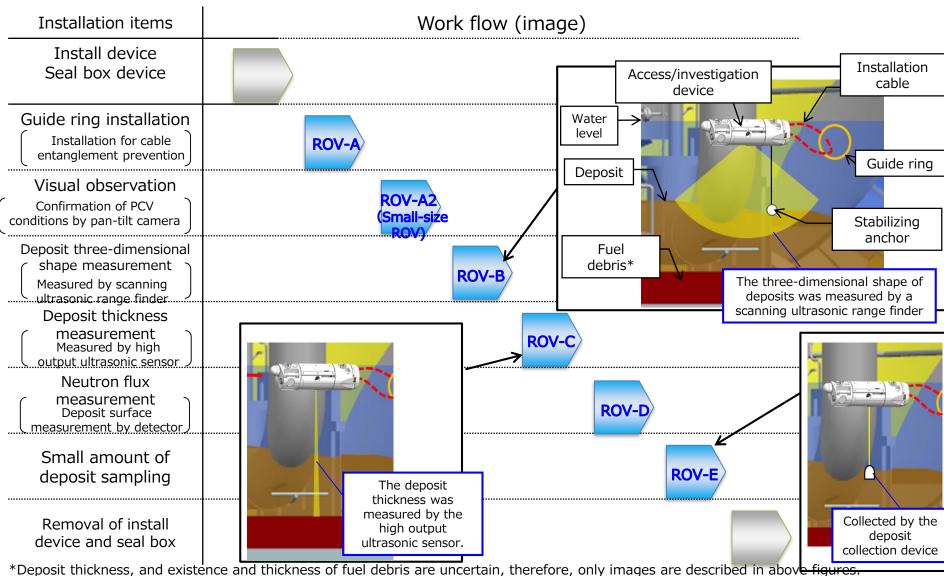

Operation line of the device

## **Unit 1: Boat Type Access Device**

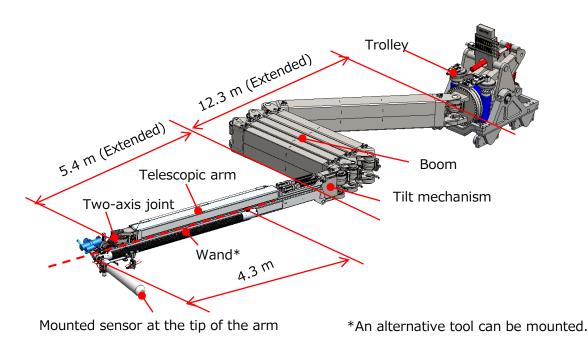

The 6-kind of boat type access/investigation device with submersible function will be prepared.

## **Arm Type Access Device**

- An arm type access device has been produced, which can access on a wide range through the penetration of the primary containment vessel (X-6 penetration) for control rods maintenance.
  - Total length of the arm: Approx. 22m
  - An investigation device up to 10kg can be loaded.

Arm type access device

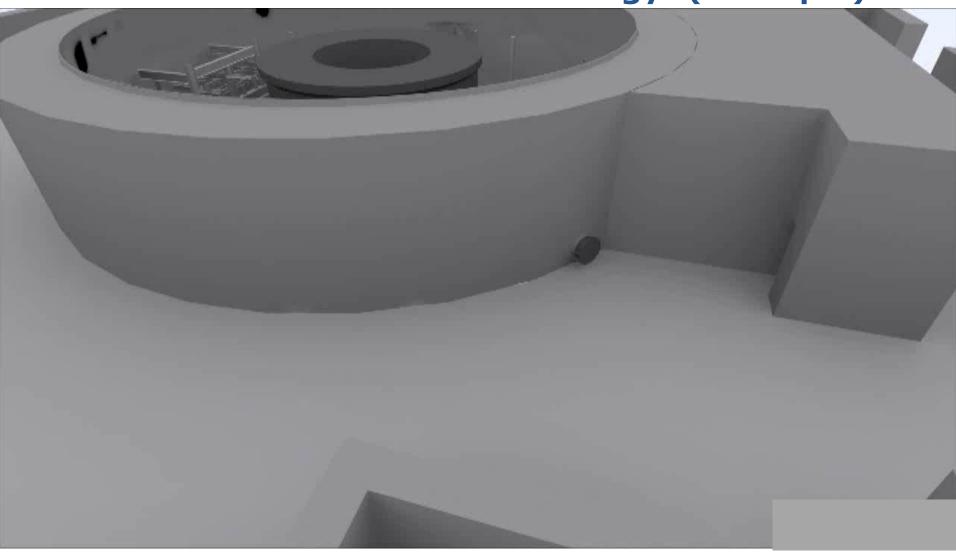

## **Arm Type Access Device (image video)**

- 2. R&D for Investigation inside PCVs(1) Results of completed investigation
  - (2) R&D for next investigation
- 3. R&D for Fuel Debris retrieval technologies

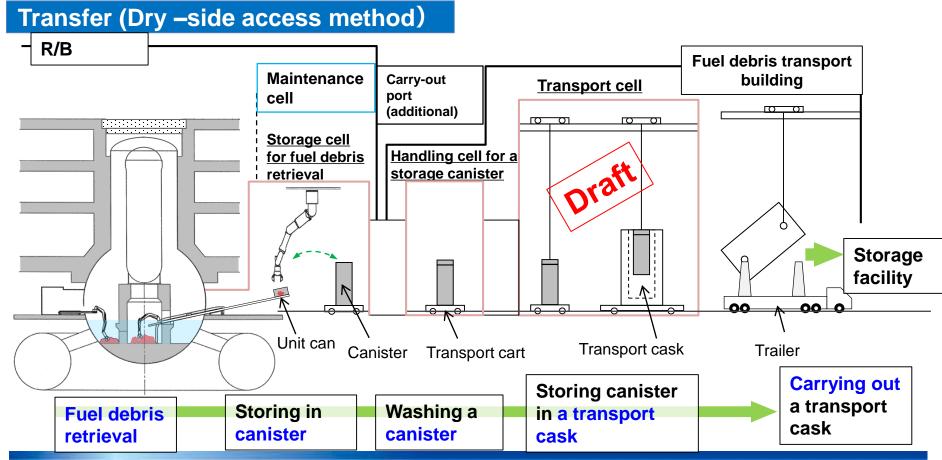

## Fuel Debris Retrieval Technology (example)

## Collection, Transfer and Storage of Fuel Debris

#### Canister design

- ⇒Response to 1F specific requirements
- High fuel exposure and enrichment → high reactivity
- MCCI → hydrogen generation caused by core concrete interaction
- Injecting sea water, melting cable → effects caused by salt and impurities

## End of presentation
