Title	Understanding the Groundwater Flow
Submitted by	CH2M HILL
<p>1. Overview of Technologies (features, specification, functions, owners, etc):</p> <p>CH2M HILL Plateau Remediation Company is the US Department of Energy’s prime contractor for the monitoring and remediation of groundwater at the Hanford site near Richland, Washington (the water below the surface of the earth occupying spaces in soils or geologic strata).</p> <p>It is developing techniques to prevent contamination in the ground from reaching groundwater, maximizing the amount of groundwater treated, and containing contaminated groundwater to minimize the potential for contamination reaching the Columbia River, which flows through the 1,520-square-kilometer (586-square-mile) site.</p>	
<p>2. Notes</p> <p>Please see appendix 6 for additional information.</p>
